

multiCrimp™
hydraulic system

- *easy*
- *safe*
- *versatile*

contact@multicrimp.com

The Idea:

multi**Crimp** is a user-friendly hydraulic system.

Well-designed tools, predefined procedures, and simple quality checks help simplify the assembly of premium hydraulic hose lines.

No compromises – far from it! Added safety and an increased lifespan make multi**Crimp** your ideal system for full-fledged real-life solutions.

Easy to implement, it delivers safe results and offers great versatility in its use.

The Problem:

Machinery failures. Production downtimes. Deadline chaos. Nothing gets done until the unforeseen problem has been solved.

A massive effect triggered by a tiny cause: a defective hydraulic hose line.

Quite often, the consequences and ensuing costs induced by such defect are disproportionately high as compared to the effort that would have been required to avoid it.

multiCrimp™

hydraulic system

The Solution:

A top-quality hydraulic hose line, easy and fast to assemble. This is exactly where our multiCrimp hydraulic system comes in:

- The premium quality of its components ensures several times the lifespan of conventional hose lines.
- Its great ease and safety of handling allows even “non-specialists” to assemble these high-quality hydraulic hose lines.
- Every workshop can benefit from multiCrimp. And so can your in-house maintenance department and your external service partner.

Calibrating tools

used to reduce the external diameter of hoses down to the required size.

Hoses

made by multiCrimp give you several times the lifespan you are used to.

Test gages

for easy quality control.

Fittings

in nearly any design and for any of your practical needs.

Crimping machines

of large and small sizes. Electro-hydraulic or with hand pump. Stationary or mobile. Ideally attuned to your practical needs.

Also available

are hose-cutting machines, hose reels for rolls, repair kits, and many other items.

multiCrimp™

hydraulic system

...easy:

The multiCrimp hydraulic system is developed such that, without any special previous knowledge in hydraulics, just about anyone can assemble top-quality hose lines.

- Everything within the system is designed to make up a harmonious whole.
- Clear explanations tell the user exactly how to handle components and tools.
- At the end of the offered training courses, participants receive a certificate and their own registration number.

Double-checking –
made easy:

S = sicher/safe ▶

The thicker end of the test gage must not go further than about halfway into the crimped fitting.

◀ **G = gut/good**

The slimmer end of the test gage should, if crimping has been done properly, travel all the way into the opening.

...safe:

The patented multiCrimp hydraulic system creates connections that withstand highest loads.

Due to the special design of the fittings, crimping produces extremely durable and absolutely secure connections.

Combine them with multiCrimp hoses, and you will get hose lines going miles beyond the required standards.

TÜV-tested and certified.

SAFETY

... versatile:

The multiCrimp hydraulic system is the ideal solution for:

- Almost all types of hydraulic power transmission in apparatuses, machines, and plants.
- Original equipment, maintenance, or repairs.
As a mobile solution, and in the workshop.
Even suited for use with repair fixtures to make special fittings.
- Operations of any size and many different industries.

An ideally configured assortment of hoses and fittings allows customized solutions.

Your Partner:

Choosing **multiCrimp** means using a safe full-fledged system that sets new quality standards.

Such safety builds trust with all customers whose machines, vehicles, or plants were fitted with multiCrimp products.

This trust in turn benefits our commercial partners and all workshops using the **multiCrimp** hydraulic system for their work.

So, from now on, look out for our logo  and demand the quality the name **multi-Crimp** stands for.
